Everest Systems is building a next-generation ERP system, re-invented for the AI era and addressing evolving business needs with modern technology

Founded: 2020

Employees: 120

Investors:

Everest is ERP reinvented for AI

Enterprise-grade ERP

Complete ERP solution

Including: Q2C, GL, P2P, HR and recruiting, asset management

Global account and compliance

Including: multi-entity, multi-currency, versioning and audit trails

Scalable unified platform

E.g. roles and permissions, external APIs, native integrations, etc.

Live Sandboxing

Risk-free system changes (test, simulate, what-if, publish,...)

Reinvented for the AI era

AI-driven automation

E.g. Enable faster close and process execution.

Custom AI agents

Business users can create their own agents, powered by your preferred AI model

AI-assisted app building (AiSpecify)

Design and build applications faster with AI. Automated requirements engineering, Interactive specification synthesis, UI generation as a feedback mechanism

Built for New Business

Automated subscription & usage RevRec

SaaS-specific Q2C, CPQ, native CRM synch, deal desk simulation

Cloud & AI cost control

Infrastructure, people, and subscription cost management for gross margin transparency

SaaS business management

SaaS metrics dashboards, integrated reporting & compliance, streamlined HR and recruiting, implementation & migration tools for faster time to value

End-to-End Process Driven and Open

Looks Familiar?

Despite **massive costs**, ERPs are not delivering the promised value

Huge gap between **business expectations** and IT reality

Complexity kills agility and automation

What is "Vibe Coding"?

Developers articulate functionality in **plain language**

AI assistants (IDEs) handle **code generation**

Democratizes software creation, enables **rapid prototyping**

Limitations of "Vibe Coding"

Serious applications need much more **precision** than simple prompts

39% performance drop in multi-turn conversations

Single-turn conversation = writing **proper specifications**

Philippe Laban*[◇] Hiroaki Hayashi**[★] Yingbo Zhou*[★] Jennifer Neville[◇]
*Microsoft Research **Salesforce Research

{hiroakihayashi,yingbo.zhou}@salesforce.com

The Specification Renaissance

Start vibe coding with a "mega prompt" = a **specification**

Dynamic end-to-end specifications as executable blueprints

True **data binding** between specs and code

Specifications become the **ground truth** – code re-generation is "for free"

The End of Off-the-Shelf Dominance

65% of costs occur after deployment

Feature bloat + Critical gaps = **value leakage**

Generic software prevents **differentiation**

The Verticalization Imperative

Generic ERPs fall short of **industry-specific** needs

Traditional barriers: **Cost, complexity, expertise**

AI enables **ultra-niche** specialization – the code comes “for free”

Everest AI Specification Manager

API Layer	GL and Financial Stmts and Records	Billing / Invoicing	Multi Entity / Currency / Taxation	Customer and Revenue Management	Procurement and Vendor Management	Asset and Inventory Management	People and Expense Management	...
Services	Security and Access Control	Compliance Mgmt and Certifications	Service Level Agreements	Hosted Visual Studio Code	Scalability and Performance	Cloud and AI Cost Mgmt	Reporting & Analytics	...

Everest ERP Business Platform

The Future of Enterprise Software

New competencies: **AI fluency** & domain expertise

IT becomes an **enabler** of innovation

Business-led, **AI-driven** solution development

Precision-Engineered Competitive Advantage

Software becomes a **direct expression** of business strategy

Specialized, composable, AI-accelerated

The democratization of **precision** in enterprise software
